

SIBTE HUSSAIN

Full-Stack Developer (React / Node.js / Next.js)

Lahore, Pakistan • sibte566@gmail.com • +92-300-6346998 • [linkedin.com/in/sibtehussain](https://www.linkedin.com/in/sibtehussain) • sibtehussain.com

SUMMARY

Full-Stack Developer with 3+ years shipping production web and mobile applications end to end, from Node.js/Express/NestJS APIs and database design through React, Next.js, and React Native frontends. Comfortable owning a feature from schema to UI, including authentication, real-time features, dashboards, and performance optimization. Reviews and tightens AI coding agent output to ship faster without sacrificing quality. Designs REST API contracts and schemas alongside frontend requirements to cut rework between backend and frontend teams, and mentors newer team members on module structure and code review standards. Strong async/remote communicator; runs client demo calls and requirements sessions directly.

SKILLS

Frontend & Mobile: React.js, Next.js, TanStack Start, React Native, Expo, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Material UI, ShadCN

Also: Prisma, Zod, WebSocket/Socket.IO architecture, CI/CD pipeline design

Backend & APIs: Node.js, Express.js, NestJS, REST APIs, GraphQL, Socket.IO, WebSockets

Databases & Cloud: MongoDB, PostgreSQL, MySQL, Supabase, Firebase, Vercel

State & Data Management: Redux Toolkit, React Query, Context API, client/server state, caching, validation flows

Auth & Integrations: OAuth 2.0, JWT, RBAC, Stripe, NextAuth, UK Companies House API, Gemini API

Quality & Testing: Jest, Vitest, React Testing Library, Playwright, MSW (Mock Service Worker), Appium, Docker, Git/GitHub, CI/CD, Agile/Scrum

AI-Assisted Development: Reviewing and tightening AI coding agent output to ship faster without sacrificing architecture quality

EXPERIENCE

Full-Stack Developer | Visionixity

Mar 2026 – Present, Remote

Part-time Mar – Jun 2026; full-time since Jun 2026

- Build and maintain a full-stack client application using NestJS, TanStack Start, and MongoDB as a full-time remote developer.
- Lead client demo calls and requirements-gathering sessions, translating feature discussions into sprint-ready tasks with the team.
- Take part in system design discussions with the team lead, shaping architecture decisions before development starts on new projects.
- Work directly with the founding team on both product and technical decisions given the agency's small team size.
- Contribute to shared backend modules and API conventions used across the client's application as new features are added.

Software Engineer (Full-Stack) | PlanLab Solutions

Oct 2024 – Mar 2026, Lahore, Pakistan

- Developed and maintained Node/NestJS REST APIs alongside Next.js and React Native frontends, covering dashboards, authentication, and form-driven modules end to end.
- Cut page load time by ~25% by restructuring API state handling, adding caching layers, and lazy-loading heavy routes, removing unnecessary re-renders and duplicate network calls.
- Reviewed pull requests and led architecture discussions with the team to keep the codebase consistent and easy to extend.
- Implemented OAuth 2.0, JWT, and role-based access control on client-facing flows, backed by Jest/RTL release checks.
- Maintained Docker-based local environments and CI/CD pipelines, and fixed production regressions within a 4-developer team, cutting release-blocking bugs by 50%.
- Designed REST API contracts and database schemas alongside frontend requirements, reducing rework between backend and frontend teams.
- Mentored newer team members on NestJS module structure and code review standards.

- Built responsive React.js and Next.js interfaces with Tailwind CSS and Material UI, shipped directly to production.
- Paired with senior engineers on implementation reviews, production troubleshooting, and architecture improvements across the codebase.
- Traced hard-to-reproduce UI and API bugs to root cause using browser dev tools, network inspection, and server logs.
- Built REST and GraphQL API integrations with authentication, Redux Toolkit state sync, and structured error handling for real-time data.
- Wrote unit and integration tests with Jest and React Testing Library to raise coverage on critical flows.

SELECTED PROJECTS

NowVPlay: *Next.js, Node.js, Redux Toolkit, OAuth, Material UI* • www.nowvplay.com

- Built a sports-tech platform with multi-tier client management, dynamic routing, and role-based dashboard layouts.
- Used Redux Toolkit and protected routes to manage live tournament data views and user-specific access flows.
- Improved maintainability by separating dashboard UI, authentication, and data-state logic into independent, testable modules.

VueCent: *React Native, Supabase, PostgreSQL, Gemini* • [Play Store](https://play.google.com/store/apps/details?id=com.vuecent)

- Shipped a personal finance app covering budgeting, expense tracking, custom categories, receipt scanning, and reminder alerts.
- Designed the PostgreSQL schema and Supabase integration handling authentication, data storage, and per-user finance records.
- Connected Gemini vision models to extract receipt data from images, cutting manual entry time by 80% for large expenses.
- Built offline-first expense logging so users could record transactions without a live connection, syncing once back online.

GoodFynd: *React Native, Redux Toolkit, React Query, Socket.IO* • www.goodfynd.com

- Built vendor order management, dashboard screens, and in-app messaging for a food truck platform.
- Integrated Socket.IO for live order updates and real-time communication across active vendor sessions.
- Managed server state with React Query and Redux Toolkit, caching responses to cut repeated network calls by 50%.
- Designed the vendor-facing order dashboard, prioritizing at-a-glance status updates during high-volume service windows.

Pecunia: *Next.js, Stripe, NextAuth, Companies House API, PostgreSQL, Prisma* • www.myukaccountant.co.uk

- Delivered onboarding, authentication, payments, and dashboard modules for a SaaS accounting platform serving 500+ active users.
- Used AI coding agents to accelerate development, reviewing and tightening their output against architecture and code-quality standards before it shipped.
- Integrated Stripe payments, NextAuth, and Companies House lookups with input validation and error handling.
- Designed a normalized PostgreSQL schema and backend data layer for invoices, subscriptions, and user accounts, centralizing all business and billing data server-side.
- Built reusable, validated form components for the onboarding flow to cut invalid submissions and reduce support back-and-forth.

RealWealthy: *Next.js, Node.js, Google Maps API, Plaid, Onfido*

- Built a multi-module real estate platform integrating Google Maps for property search, Plaid for payment and banking connections, and Onfido for identity verification.
- Worked on all frontend modules (builder, user, inspector, admin), covering UI/UX and API integrations.
- Coordinated with backend teams on flow design, balancing a smooth user experience with a secure, reliable data flow.
- Optimized map rendering and search filtering for large property datasets, keeping the UI responsive on slower connections.

EDUCATION

Bachelor of Science in Computer Science, University of Management and Technology, Lahore, Pakistan (2018 – 2022)
